Delivering efficiency, safety, and satisfaction through innovative medication management programs for post-acute and senior-living providers.

## **Reduce med-pass time, increase patient-care time.**

Automated short-cycle dispensing from Symbria Rx Services saves valuable time for your nurses—so they can better focus on quality patient care.

### **Why change?**

How about less waste, cost control, reduced readmissions, better service, and more? Designed specifically for skilled-nursing providers, our comprehensive medication management program delivers:

- 1 Expert cost management and online access.** We keep costs in check for everyone from patients to providers through industry-leading formulary management and sophisticated reporting systems, including off-formulary alerts and auto-substitution options. Plus, our streamlined reporting and MySymbria portal provide fast online access to cost, prescribing, and payer data to give you the management power and speed you need.
- 2 Reduced readmissions.** We help reduce costly readmissions by promoting patient compliance through our discharge planning and Dispense to Home program, which streamline transitions.
- 3 Trusted expertise and exceptional service.** Symbria pharmacists are available 24/7 to answer questions or meet emergency needs. And both our Consultant Pharmacists and Nurse Consultants make monthly on-site visits to assist with survey compliance, environmental audits, and nurse education.

## **We stay focused on serving you better.**

**We combine our deep expertise and specialized experience in geriatric medication management with a compassionate, collaborative approach which includes Best Practices Committees where our clients can share feedback and ideas.**

**Because we know that to continue being truly innovative, we need to anticipate future needs as well as meet current ones.**

**Our passion for performance—and exclusive focus on seniors—helps you compete better.**

**Improved efficiency and safety.** We offer two options: one-day multi-dose or seven-day unit-dose dispensing. With both options, orders are packaged and delivered in pre-sorted strips identified by patient name, medication name, dosage, date, and administration time, enhancing med-pass accuracy and speed. Our leading-edge Check Pass technology automatically checks all packaging for accuracy. That means fewer returns, less waste, and better cost control. In addition, all orders are bar-coded for use with electronic medication administration record (eMAR) solutions.

**IV services.** We provide all medications, supplies, and equipment needed to deliver IV therapy for hydration, total parenteral nutrition (TPN), and antibiotic therapy—plus nurse training, and more.

**Advanced electronic emergency medication carts.** More affordable than older cabinet-type products, our system may allow for multiple carts in larger communities. Safety, billing, and control are assured thanks to unique individual logins, user photo storage, and authorization-code-based access to controlled substances.

**We bring you the best of all worlds.**

At Symbria Rx Services, we take pride in delivering the exceptionally dedicated, personalized service you value from an independent pharmacy.

At the same time, we have the resources—and the willingness to use them—to invest in efficiency-building technology, highly qualified customer support, and the development of innovative solutions that help you serve your patients better.

**The result is a one-of-a-kind partner that:**

- 1 Bolsters** your staff, patient, and family satisfaction.
- 2 Assures** accuracy rates that exceed 99.99 percent.
- 3 Sharpens** your competitive edge.

**About Symbria Rx Services**

Symbria Rx Services is a division of Symbria, a leading national developer and provider of innovative, outcome-driven programs, products, and services.

Our passion, insight, and performance—and our exclusive focus on seniors—drives us to develop and implement medication management solutions that benefit senior-living providers in all settings.
